FOUR SEASON SENSATION

This garden represents a partial conversion of lawn to garden. Reshaping the existing lawn using a curvilinear approach adds flow and movement. Ornamental and coniferous trees provide height, shade and winter interest without interfering excessively with the views. This once water-hogging space is now a lush garden with plants that provide four season beauty, color and interest; thrive in low-water, clay soil and full sun conditions; and attract butterflies and hummingbirds. Drip irrigation and organic mulch, along with proper plant selection, aid in long-term water conservation.

ROCK GARDEN

This raised xeriscape garden is in full sun and visible from all sides. The boulders, native grasses and “evergreen” plants, Bluestem Joint Fir, Mock Bearberry and Parry’s Century Plant, give this garden plenty of winter texture and interest. A native Cowboy’s Delight (Sphaeralcea coccinea) meanders thru the garden. Spring bulbs of Tete A Tete Daffodils, Crocus, and small species tulips add extra bloom time, and TABLE MOUNTAIN[®] ice plant will bloom in November on our warm ‘Indian Summer’ days.

DRY SHADE

Low-water gardens for shade are a bit more challenging to design than their sunnier counterparts because many plants that grow naturally in shady spots are found in woodlands with regular moisture. This garden incorporates western natives and plants from around the world that are naturally adapted to dry shade. Plant the veronicas in drifts along the front of the border to fill areas between the perennial flowers and lawn area. These same plants can be combined in smaller quantities for smaller areas.
